Abstract. Resumo...

1 Introduction

The present study proposes a novel and simple strategy to defined high-level unified QoS metrics for Internet services resorting to fuzzy logic principles [1]. Attending to the specificity of the problem, which combines the difficulty of handling multiple low-level QoS parameters with the blur boundaries of user perceived QoS, the use of fuzzy logic to achieve a unique per service QoS metric brings a clear advantage and simplicity to the solution. Fuzzy logic has two different meanings [2]. ...
